Firmior - School Diary Application

This Web application provides the same functionality as a traditional school diary that helps parents and teachers communicate.

Teachers can give assignments to a class / student. Update class timetable, marks for each subjects which in turn becomes annual progress reports. Parents can review these reports and add their comments on these reports. The parents can even apply for students leave and the class teacher can grant/reject those requests accordingly. Assignments details and time tables are also available for view.

Messages or remarks can be sent by parents to their class teacher. Likewise, the Principal or class teacher can send a message to all the students. Teachers get notification when parents have read their messages.

This is a very flexible application to set up, functions are authorized depending on the roles that are played by various staff in the school. A Class teacher will be able to access details of his own class only, whereas the Principal has access to the school diaries of the entire school with the click of a button.

A Home – School – Home Interacting solution

- > Give the parents and teachers a way to keep connected to the school online.
- > No need for parents to go to their children's school for reports.
- > Teachers can do their desk work (like adding attendance details, making progress reports, giving assignments, sending messages to parents etc.) from anywhere.

Standard and secure technology

- > Runs on any platform since it only needs internet connection and a browser.
- > PHP is the server-side scripting language which is the most secure server side scripting language and MySQL server as database engine.

Our Application Offers

- Customized parents windows
- Customized teachers window
- Auto generating Students Progress Reports
- Auto generating attendance reports.
